28 January 1972

MEMORANDUM FOR THE RECORD

SUBJECT: T&E Reports

*Rec'd 2 Feb 72*  
*BSB*

Two report writing decisions have been arrived at in consultation with the RED Monitors:

1. Optical Equipment Test Kit

A complete printed T&E report will be produced for the prototype on hand. There is evidence of interest from the community in following the development, and although a Mod II development seems a certainty, there will be a significant time delay before it materializes.

2. Mann 10 X 10 Comparator

We will delay production of our T&E report pending imminent modification and re-test because:

- a) The modifications are expected within one month.
- b) PHD has ceased operational testing due to poor performance.
- c) We have no knowledge of need for an immediate report.
- d) The test engineers present work load is heavy.
